

Lithium Battery Fire Blanket

This report is offered as a guide and was developed from information which, to the best of New Pig's knowledge, was reliable and accurate. Due to variables and conditions of application beyond New Pig's control, none of the data shown in this guide is to be construed as a guarantee, expressed or implied. New Pig assumes no responsibility, obligation, or liability in conjunction with the use or misuse of the information.

Lithium Battery Fire Blanket — Instructions

STOP! BEFORE RESPONDING, UNTRAINED PERSONNEL SHOULD EVACUATE AND CALL THE FIRE DEPARTMENT.

Open blanket and center in front of compromised battery.

Hold corner straps and pull blanket over battery/vehicle.

Ensure blanket securely covers all sides around battery/vehicle and is laid flat against ground or surface.

Evacuate to a safe distance.

ATTENTION: Only trained firefighters should remove Fire Blanket after use. Images shown are for illustration purposes only. Always wear proper Personal Protective Equipment (PPE) when responding to a fire.

NOTE: Battery and Fire Blanket sizes may vary, but the response steps shown above are applicable to all.

Lithium Battery Fire Blanket — Care & Maintenance

SHELF LIFE, STORAGE AND INSPECTION

SHELF LIFE

- Product has an indefinite shelf life; please inspect the stored product regularly to ensure it's in a usable state.
- To determine the date of manufacture, look on the tag attached to the fire blanket. The first two numerical digits will represent the year of manufacture; the following two will represent the week of that year.

STORAGE

- The PIG Obsidian Lithium Battery Fire Blanket should be stored in the provided protective carry bag. It should be kept in a cool, dry place away from direct sunlight, ideally with the temperature maintained between -4°F and 95°F (-20°C to 35°C).

INSPECTION

- The PIG Obsidian Lithium Battery Fire Blanket should be inspected every 24 months to check for signs of mechanical damage, holes, tears, etc. After inspection, the Blanket should be refolded with "Z" folds every 28" and the retaining strap refastened, so that it can easily be repacked in the protective carry bag.

IMPORTANT: "Z" (or concertina) folding is essential as this eases deployment in an emergency.

⚠ WARNING

GENERAL WARNING STATEMENT

Lithium-ion batteries can sometimes enter a state called "thermal runaway," which can sometimes lead to fire, explosion, and the release of toxic smoke and fumes. Lithium-ion battery fires are chemical reactions that can continue to burn even if deprived of oxygen.

Call the Fire Department immediately in the event of any fire, whether or not you choose to use products from New Pig. Fires create great risk of injury or death and property damage. In the event of any fire, warn others to evacuate the premises, call the Fire Department and assure that you have a clear path of escape. Do not take any unnecessary risks to combat a fire that has already started.

While no fire suppression device can fully extinguish a lithium-ion battery fire until the chemical reaction has completed, the products offered by New Pig may help temporarily reduce the risk of damage by managing thermal runaway, partially insulating the fires, and potentially reducing the paths for flame or heat to escape and spread. **PIG™ Obsidian™ Lithium Battery Fire Blankets may help, but are not guaranteed, to suppress, block, capture or contain projectiles that a thermal runaway event can generate.** If you are able to deploy a PIG™ Obsidian™ Lithium Battery Fire Blanket, **evacuate the area of the thermal runaway event immediately after deployment**, even if it may appear that the product has contained the fire.

This product is not guaranteed to prevent thermal runaway from starting or spreading beyond its immediate area. Burned or partially burned lithium-ion batteries have the potential to reignite and should be handled with extreme care by trained first responders or firefighters.

Flammable gasses may accumulate under a deployed PIG™ Obsidian™ Lithium Battery Fire Blanket. These accumulated gasses can result in fire and/or explosion if exposed to oxygen. Therefore, after a PIG™ Obsidian™ Lithium Battery Fire Blanket is deployed, **evacuate the area of the thermal runaway event immediately after deployment**, even if it may appear that the product has contained the fire. Further handling of a deployed PIG™ Obsidian™ Lithium Battery Fire Blanket should only be undertaken by trained first responders or firefighters.
