

PIG Stormwater Sampler

Assembly Instructions

1. Remove the pump section from the kit container.
2. Thread a straight section into the bottom of the pump. The section will be threading into the internal threads on the pump.
3. Continue to add up to five sections depending on how long the Stormwater Sampler needs to be.
4. Thread in the check valve section. This is easily identified with a 1" blue collar.
5. Thread in the water scoop section. Make sure all connections are tight.

Operation Instructions

1. Place the water scoop end into the drain to capture the water that is being sampled.
2. Hold the 500ml bottle by the handle in non-dominant hand. Place the pump in that same hand; line pump spout up with the rim of the bottle.
3. Start to operate the pump with dominant hand, cycling in complete strokes. It will take at least 10 strokes to get the water up to the spout.
4. Secure sample of water.

NOTE: Always decontaminate the Stormwater Sampler before use.
