

# PIG® Oily Water Cleanup Towels

## Features & Benefits

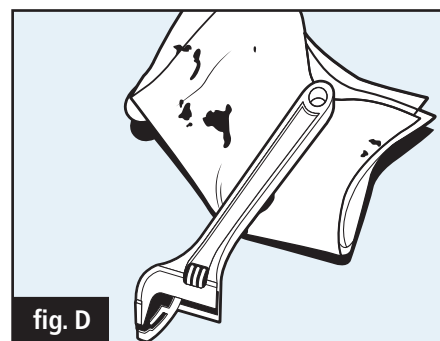

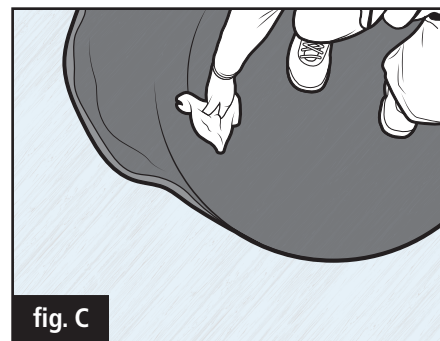

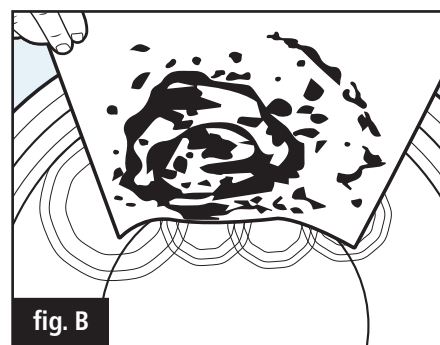

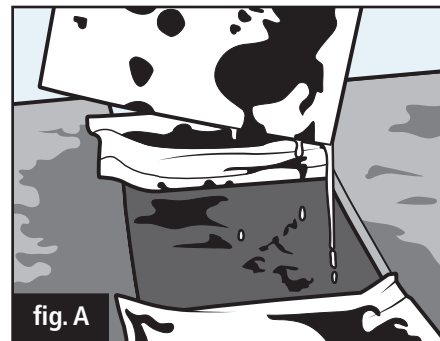

PIG Oily Water Cleanup Towels are designed to work differently than conventional oil-only spill products. These absorbent towels allow water to pass through them while capturing oils, fuels and other hydrocarbons.

- Towels are ideal for spill response, general filtration of oily water and other applications where oil needs to be removed from water
- Lightweight and soft, yet durable, material can conform to irregularities of any surface
- Perfect for cleanups in outdoor applications, especially in wet or rainy conditions; floats to clean up spills on water, even removes the oily sheen
- Towels can be used for final cleanup of oil-based leaks and spills
- White color tells you it's only for oils; clearly shows saturation level during spill response
- Can be wrung out after use to reduce waste or for fuels blending or incineration

**Notice:** Effluent or discharge water should be tested to ensure compliance with water quality standards. Dispose of used absorbents in compliance with local, state, federal or country regulations.

## Applications

- Place towel directly onto spilled liquids to absorb oils (**fig. A**)
- Use for flow-through applications where oily water passes through the towel; oils, fuels and other hydrocarbons will be captured while the water is filtered (**fig. B**)
- Durable material conforms to irregular surfaces; tough enough for use on concrete, asphalt or rocky textures (**fig. C**)
- Use to clean oily tools, equipment, metal or other oil-covered surfaces (**fig. D**)
