

## **PIG® Mat with 50% Recycled Content FAQ**

PIG® Universal Mat now contains 50% recycled content, and you're probably wondering how this change might affect you. Rest assured that the classic gray PIG® Mat you depend on still delivers the same value and performance you demand.

### **Q: What PIG® Mat Pads and Rolls contain 50% recycled content?**

**A:** Only gray PIG® Universal Mat contains 50% recycled content. For more information, please visit [newpig.com](http://newpig.com) for the Recycled PIG® Mat List in the MSDS & Tech Resources section of our web site.

### **Q: What should I expect out of PIG® Mat with 50% recycled content?**

**A:** You can expect the same great performance you have always known. The recycled content in PIG® Mat is still 100% polypropylene. The color is the same and all of the features you love about PIG® Mat are completely unchanged.

### **Q: What is the recycled content?**

**A:** The raw materials used to produce PIG® Mat are comprised of over 50% post-industrial recycled polypropylene fibers generated from sources outside our absorbent manufacturing process. These fibers could otherwise be destined for a landfill, but instead we recycle them into our gray Mat products. This simple change cuts our consumption of new polypropylene in half — and that's good for the environment.

### **Q: How do I know it's still the best Mat on the market?**

**A:** We've developed a process that uses only recycled materials that meet our rigorous standards. Then we perform extensive testing on finished PIG® Mat samples to confirm that critical characteristics, such as absorbency, durability, strength, wicking, floor grip, flame resistance and chemical compatibility meet our expectations — and yours.

### **Q: Is it still as strong? Am I still going to be able to walk on it?**

**A:** Absolutely. We've RAT-tested (reciprocal abrasion tested) PIG® Mat to make sure that it still holds up to the toughest foot traffic you can throw at it. It still has eight thermally bonded layers that stay together — even when the mat is fully saturated.

### **Q: Will it still be as absorbent?**

**A:** Yes. Absorbency and liquid retention are unchanged.

### **Q: Will it still be as chemically resistant?**

**A:** Yes. It is still 100% polypropylene, so you can use PIG® Mat with confidence to absorb anything that you've used it for in the past.

### **Q: Will it still last all day/week/month?**

**A:** Since durability, absorbency and chemical resistance are the same, it will have exactly the same longevity as the PIG® Mat you purchased from us last week, last month or last year.

### **Q: Will the price go up?**

**A:** No. Unlike some green products that come with a higher price tag, the price of PIG® Mat will remain the same.

### **Q: Why would we mess with a good thing?**

**A:** New Pig wants to help protect the environment. We've developed a way to incorporate recycled content into PIG® Mat and still maintain the same performance. Using recycled fibers in our Mat keeps a large amount of process scrap material out of the landfill and significantly lowers our consumption of new polypropylene. It's a simple change that has a positive environmental impact for us — and for you.
