

KEEP YOUR FLOORS CLEAN

USING THE RIGHT FLOOR CLEANING PROCEDURES REDUCES SLIP, TRIP AND FALL RISKS

1 CLEANING FREQUENCY AND INTERVALS

Clean floors when there is little to no traffic to prevent people from slipping and falling during the cleaning.

Wash floors at regular intervals. Not properly cleaning floors allow dirt and other debris to build up, but cleaning floors too frequently can prematurely wear down the floor's finish.

2 CLEANER TYPE AND AMOUNT

Use the right cleaning product based on floor type to prevent chemical build up or etching.

Measure out the correct amount of cleaner and water before each cleaning.

3 TOOL QUALITY AND CLEANLINESS

Wash and dry mops, pads, buckets and other cleaning tools after each use. Ensure tools are clean and dry before reusing.

Replace worn or broken cleaning tools promptly.

4 WATER QUALITY AND TEMPERATURE

Use fresh water before each cleaning. Replace water when it becomes dirty during cleaning.

Check the cleaning chemical container for the correct water temperature to use.
