

HOW TO CHOOSE THE RIGHT LEAK DIVERTER

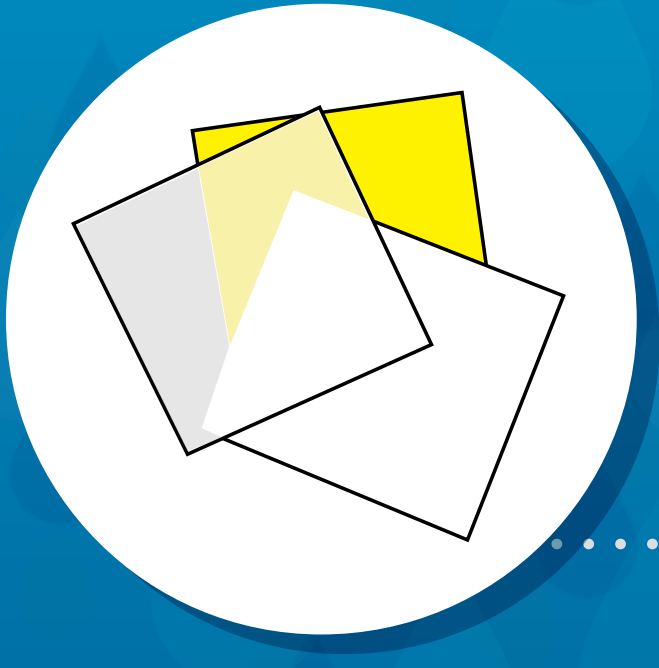

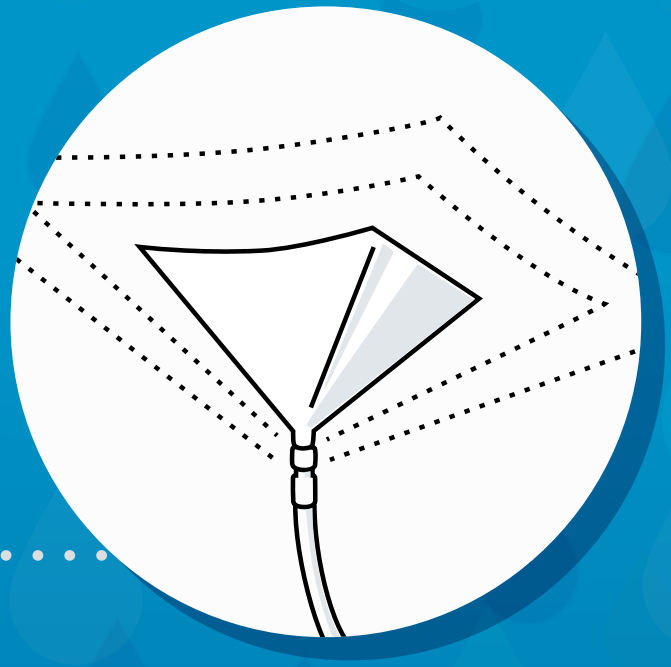

1

Survey the spots where you're most likely to have a leak: roof, ceiling, pipes, HVAC, etc.

2

Choose the diverter size and style that matches the leak area. Custom sizes are also available.

3

Decide on the color: Clear and translucent diverters make it easy to check water flow; hi-viz yellow stands out; gray blends in.

4

Choose the appropriate hanging straps and hose for your application.

5

Consider whether you want to divert the leak into a drain or use a container to collect the liquid.

HOW IT WORKS

Collection tarp captures liquid and funnels it to the hose connection.

Hose channels liquid to a floor drain or collection container.
