

PIG Waste Compactor

Minimize Waste with the PIG Waste Compactor

Waste disposal is one of the most challenging issues environmental managers face today. Close to 12 billion tons of industrial waste is generated in the U.S. annually. As disposal costs rise, ranging from \$200 to \$700 a drum, companies are pursuing innovative ways to reduce waste disposal costs.

The PIG Waste Compactor helps to reduce disposal costs of absorbents and other wastes by compacting them, increasing the amount of waste that can fit into a drum.

Applications for the PIG Waste Compactor

We surveyed our customers and found that the PIG Waste Compactor was used most commonly in metalworking, chemical and electrical industries, as well as at government and military sites. Our study revealed that the PIG Waste Compactor has two primary applications: compacting waste to decrease the number of drums destined for disposal and compacting a virgin product to more efficiently utilize drum space.

Nine out of ten PIG Waste Compactor customers compacted soft wastes such as paper, filters, rags, wipers and PIG Absorbents. These wastes commonly contained hydraulic, lube and cutting oils, paints and coolants.

The PIG Waste Compactor reduced the number of drums destined for disposal

PIG Waste Compactor customers saw a dramatic reduction in the number of drums they sent out for disposal. Compaction ratios ranged from a high of nearly 5:1 to a low of 2:1 (see table above).

Waste compaction equals savings on disposal

One customer realized a \$28,000 savings in disposal costs within a year. Another felt the PIG Waste Compactor paid for itself just by reducing his drum purchases alone. In many cases, the PIG Waste Compactor paid for itself within three to six months.
